Results of taking

Nutricode Weight Blocker

We are pleased to present the changes observed in the blood test results of one of our clients after 2 months of regular use of the Weight Blocker dietary supplement.

LIPID PANEL	INITIAL RESULT (MG/DL)	RESULT AFTER 2 MONTHS (MG/DL)
Total Cholesterol	176	175
HDL Cholesterol (good)	64	70
Non-HDL Cholesterol	112	105
LDL Cholesterol (bad)	93	91.29
Triglycerides	107	73

Summary of results:

1. SIGNIFICANT DECREASE IN TRIGLYCERIDES – BY 34 MG/DL

High levels of triglycerides are a major risk factor for the development of atherosclerosis, stroke, and heart attack.

2. DECREASE IN LDL CHOLESTEROL BY 1.71 MG/DL

Excessive LDL cholesterol levels contribute to the development of atherosclerosis.

3. DECREASE IN NON-HDL CHOLESTEROL BY 7 MG/DL

Non-HDL cholesterol includes all atherogenic lipoproteins involved in the atherosclerotic process.

4. INCREASE IN HDL CHOLESTEROL BY 6 MG/DL

The higher the HDL fraction, the lower the incidence of heart disease. HDL lipoproteins play a crucial role in removing excess fat compounds from the venous blood by transporting cholesterol to the liver. Furthermore, they protect arterial walls, reducing the likelihood of atherosclerosis development.

Weight Blocker by NUTRICODE is an exceptional product designed to create a barrier in the small intestine to *prevent fat absorption from food.*

This not only helps maintain an attractive figure but also supports what is most important – a healthy lipid profile, which is essential for cardiovascular health!
